

Customisation, management and shipment of personal and collective protective equipment

Workplace safety specialist ANTIA EPI enhances service levels for more than 600 clients with Easy WMS.

Country: **France** | Sector: **hardware & industrial supplies**

CHALLENGES

- Organise a warehouse handling up to 44,000 items.
- Ensure the accurate delivery of customised protective equipment.
- Synchronise packing, labelling and shipping processes with carriers.

SOLUTION

- Easy WMS Warehouse Management System.

BENEFITS

- More efficient travel paths within the warehouse, reducing excessive movement and accelerating order picking.
- Faster shipping operations through streamlined packing and dispatch processes.
- Greater control over workwear and PPE shipments to more than 600 clients.

Based in Corbas (France), ANTIA EPI specialises in personal and collective protective equipment. The company provides a range of tailored services, including safety audits of current materials, operational safety recommendations, and the selection, supply and customisation of workwear.

» **Inventory: 800+ SKUs**

» **Clients: 600+**

Personal and collective protective equipment (PPE and CPE) often serves as the last line of defence between potentially hazardous situations and worker safety. That is why ANTIA EPI has built its reputation around expertise in this specialised field. Based in Corbas, France, the company brings more than a decade of experience in auditing, managing, customising and supplying workwear and protective equipment. To modernise its logistics operations and strengthen service levels for its 600-plus clients, ANTIA EPI implemented Mecalux's Easy WMS warehouse management system.

The company stores up to 44,000 units across more than 800 SKUs, including safety helmets and glasses, face shields, earplugs,

masks, gloves, footwear, overshoes, harnesses and high-visibility apparel. Since deploying Easy WMS, warehouse operators have used RF scanners to identify products stored in Mecalux selective pallet racking. "We were looking to gain greater control and speed up dispatch operations," says Nabila Monnet, Deputy Director of ANTIA EPI.

Connected with the company's EBP ERP system via integration specialist AMIGEST, Easy WMS provides real-time visibility into inventory and warehouse activity. Delivered as a SaaS (software-as-a-service) solution, it has also improved travel routes within the facility, reducing unnecessary movement and accelerating order picking.

With the VAS module, warehouse operators complete customisation tasks through guided workflows

Automated customisation processes

In addition to helping clients select the most appropriate PPE and CPE, ANTIA EPI offers services where businesses can add their logos and other custom designs to equipment and materials without altering their protective properties. To manage these products effectively, the company implemented the Easy WMS Value-Added Services (VAS) module.

The software guides operators step by step through each customisation process. It also provides ANTIA EPI with an additional layer of control, enabling the company to filter order lines according to agreed shipping dates. “We have complete visibility into the customisation process for our products,” says Monnet. The result is a smoother workflow and greater responsiveness in dispatch operations.

Priority shipping

Reliable coordination with carriers is essential for ANTIA EPI, which commits to delivering products across France within 48 to 72 hours. Through the Multi-Carrier Shipping Software module, the company has automated communication between its warehouse and transport partners. The solution coordinates packing, labelling and distribution processes, reducing errors while improving the customer experience. It also generates shipping labels and delivery notes, allowing operators to focus on higher-value work. “We’ve gained efficiency and reliability throughout the dispatch process,” says Monnet.

Logistics ready for growth

Easy WMS has optimised ANTIA EPI’s logistics operations from receiving and storage through customisation and order fulfilment. The company now benefits from greater product traceability, tighter inventory control and safer, more agile warehouse processes. By digitalising its warehouse, ANTIA EPI has established a foundation for future growth while continuing to provide customers with fast, personalised and dependable service.

“With Easy WMS, we have complete visibility into the customisation of our products.”

Nabila Monnet
Deputy Director, ANTIA EPI
