

easy  WMS

SLOTING FOR WMS

Automate location management in your warehouse

This software **determines the optimal location for each SKU** based on a set of rules and criteria predetermined by the logistics manager and an analysis of current and historical demand for each product.

The module calculates the ideal location for goods based on the warehouse layout, handling equipment and picking method employed. In doing so, **it recommends classification of products according** to sales forecasts or demand analysis. This way, SKUs that are usually ordered together are slotted close to each other, optimising operator pick paths.

This is especially useful in the e-commerce and retail industries and in highly seasonal businesses with promotional campaigns, i.e., Black Friday. Slotting for WMS analyses current, historical and future demand, **suggesting a redistribution of storage locations** to facilitate more productive picking and minimise manual errors. Additionally, the module can be configured to make automatic recommendations regularly and even propose suggestions only when a certain benefit threshold is exceeded.

BENEFITS OF SLOTING FOR WMS

Enhanced utilisation of warehouse space

Cost reductions in order fulfilment and storage

Efficiency in **order picking** and supply processes

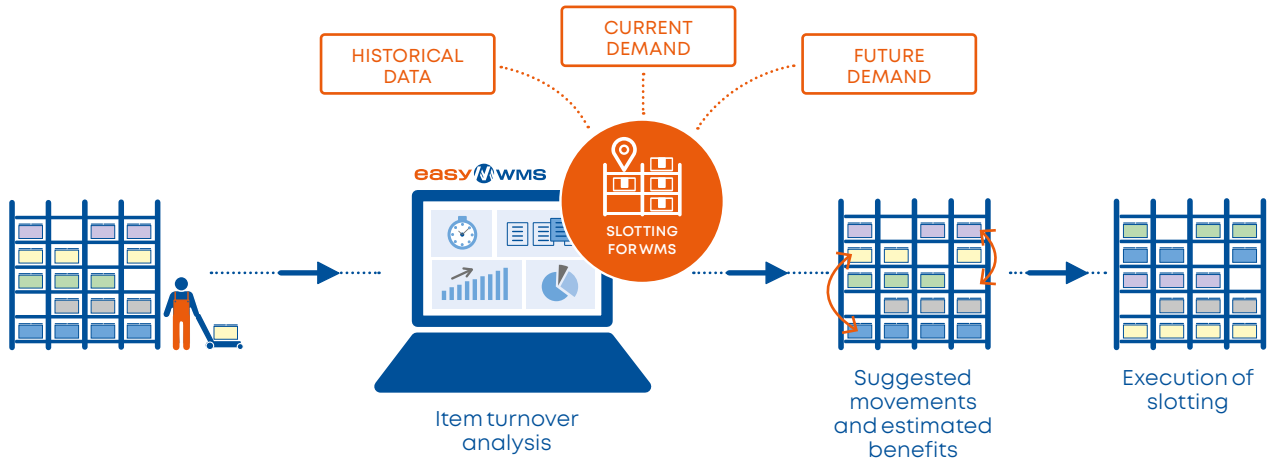

Optimisation of pick paths in manually operated warehouses

Real-time updates of orders for each product

Better insight into demand and more effective inventory control

Slotting for WMS reduces time and operational costs
by automating location management

ELIMINATE COST OVERRUNS IN YOUR PICKING OPERATIONS

Functions of Easy WMS's Slotting for WMS

- Organisation and recommendation of warehouse location changes
- Analysis of turnover and demand (current and historical) for each SKU
- Automatic generation of stock relocation tasks for each SKU
- Execution of movement tasks to carry out slotting

In-warehouse location management

Slotting for WMS, the advanced Easy WMS functionality, requires **proper parametrisation** of the module and of the warehouse management system using data on the operation of the warehouse, its layout and the assignment of each SKU located in the facility.

Easy WMS's Slotting for WMS performs analyses and recommendations prior to initiating any movements. This allows for work to be organised based on estimated benefits. Once the recommendations are approved, Slotting movement tasks are created.

Why choose Mecalux Software Solutions?

The company has 55+ years of experience in warehousing solutions and a presence in over 70 countries.

More than 400 engineers are exclusively dedicated to the development of logistics and supply chain software.

More than 1,000 facilities in 36 countries are managed by Mecalux software solutions.

Software is continuously developed and updated, thanks to major investments in R&D.

Technical support is available in multiple languages 24 hours, 365 days a year.
